Timeline for NZEBs implementation

Building permit share in Cyprus

- Residential Buildings 67%
- Non-residential Buildings 20%
- Plot division 7%
- Civil Engineer Projects 4%

ImpAct-BiPV Solution

Cable routing of the PV Window

Details of cable routing

Junction box position

Junction box position and cable routing

Cable routing for both PV window and PV balcony

MC4 connectors

BiPV solution - Cable routing

Access to the MC4 connectors for maintenance reasons

Measurements from the ImpAct-BiPV pilot site

Figure 1: Instantaneous power measurements from the installed BIPV modules recorded over the period January - April 2022. The performance of the modules during the first months of operation showed a reduction over time which is largely attributed to the change of the angle-of-incidence as we move from winter to summer time in Cyprus.

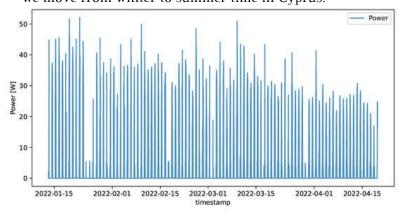

Figure 2: Weekly average performance ration (PR) for the system. The gradual reduction indicates that the system is undergoing degradation outdoors.
